

Change the label or description for the Help tab

 support.visualsp.com/knowledge-base/change-the-label-or-description-for-the-help-tab/

June 14, 2018

Applies to: **VisualSP Classic**

If you need to change the initial tab name or hover tip for the Help tab in VisualSP Classic Edition, this can be done quickly via PowerShell.

1. Log on to one of the servers in your SharePoint farm.
2. From the Start menu, open the SharePoint Management Console.
3. Enter the following command: `Set-VisualSPHelpTabLabel -Label "TabName" -Description "Descriptive text" -LCID 1033`

NOTE: Some organizations wish to include an ampersand character in one or both of these values. If you are using a version *earlier than v5.5.5.0*, you must encode the ampersand character like this: "Help & Training" This encoding is no longer necessary from version v5.5.5.0 on.
