

Is VisualSP Classic TLS 1.2 Compliant?

 support.visualsp.com/knowledge-base/is-visualsp-classic-tls-1-2-compliant/

April 27, 2018

Applies to: **VisualSP Classic**

VisualSP Classic uses the transport layer and certificates that are used in the web applications on the SharePoint farm in which is installed. It does not make use of its own certificates. The following TechNet articles will help you verify that your SharePoint farm is TLS 1.2 compliant:

- [Enable TLS 1.1 and TLS 1.2 support in SharePoint Server 2016](#)
- [Enable TLS 1.1 and TLS 1.2 support in SharePoint 2013](#)
- [Enable TLS 1.1 and TLS 1.2 support in SharePoint 2010](#)
