

Test the Install of VisualSP Classic

 support.visualsp.com/knowledge-base/test-the-install-of-visualsp-classic/

December 20, 2017

Applies to: **VisualSP Classic**

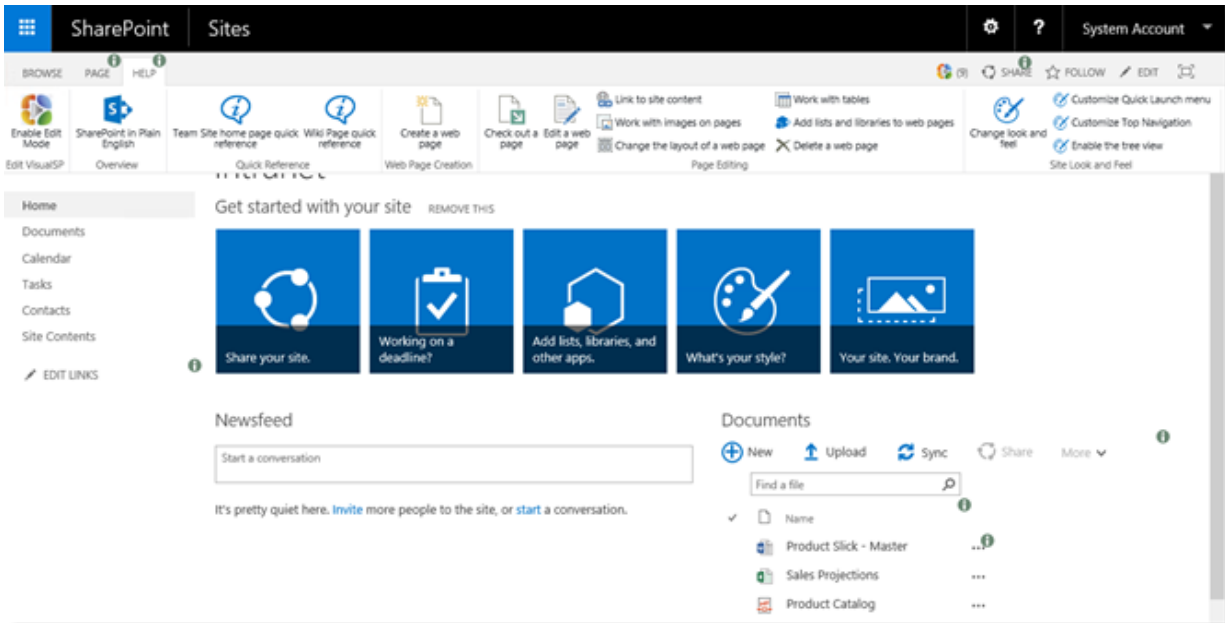

Test the Solution

Once the VisualSP Help System is installed, the Help tab and Informational Icons should be available across all site collections if you installed the Standard or Enterprise version and followed the recommendations in this guide.

If you installed **VisualSP Express** Edition, Help Items will have to be created in each site collection level before they will display. Look for the Help tab and Informational icons in the following types of pages:

1. Web page
2. List and Library pages
3. List and Library Settings pages
4. Site Settings page
5. And more...

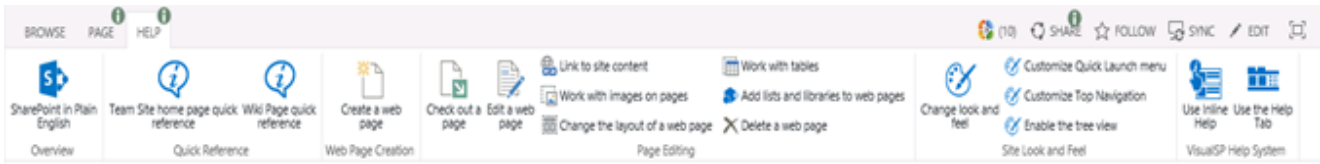

Below are a few examples to test out the functionality.

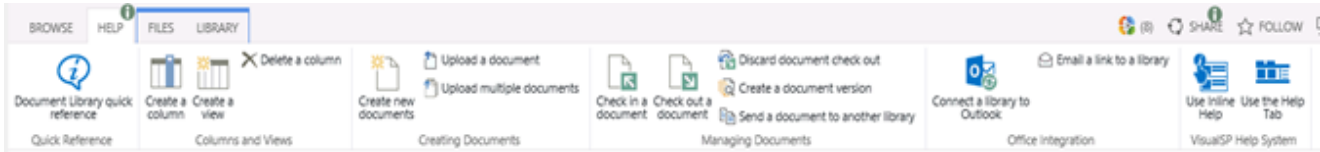

Note: The content might differ from below in your installation dependent on your configuration and latest updates.

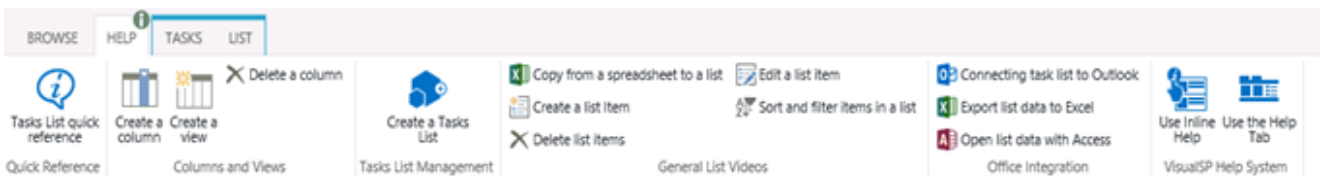

Page

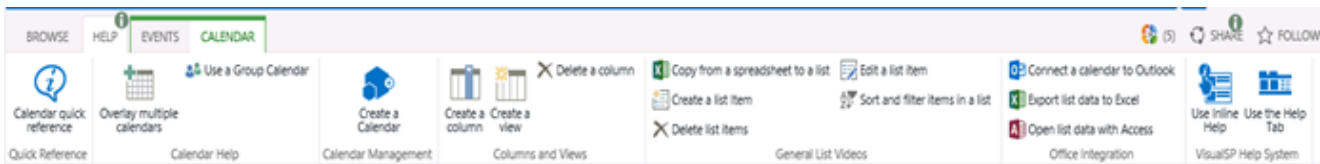

Document library

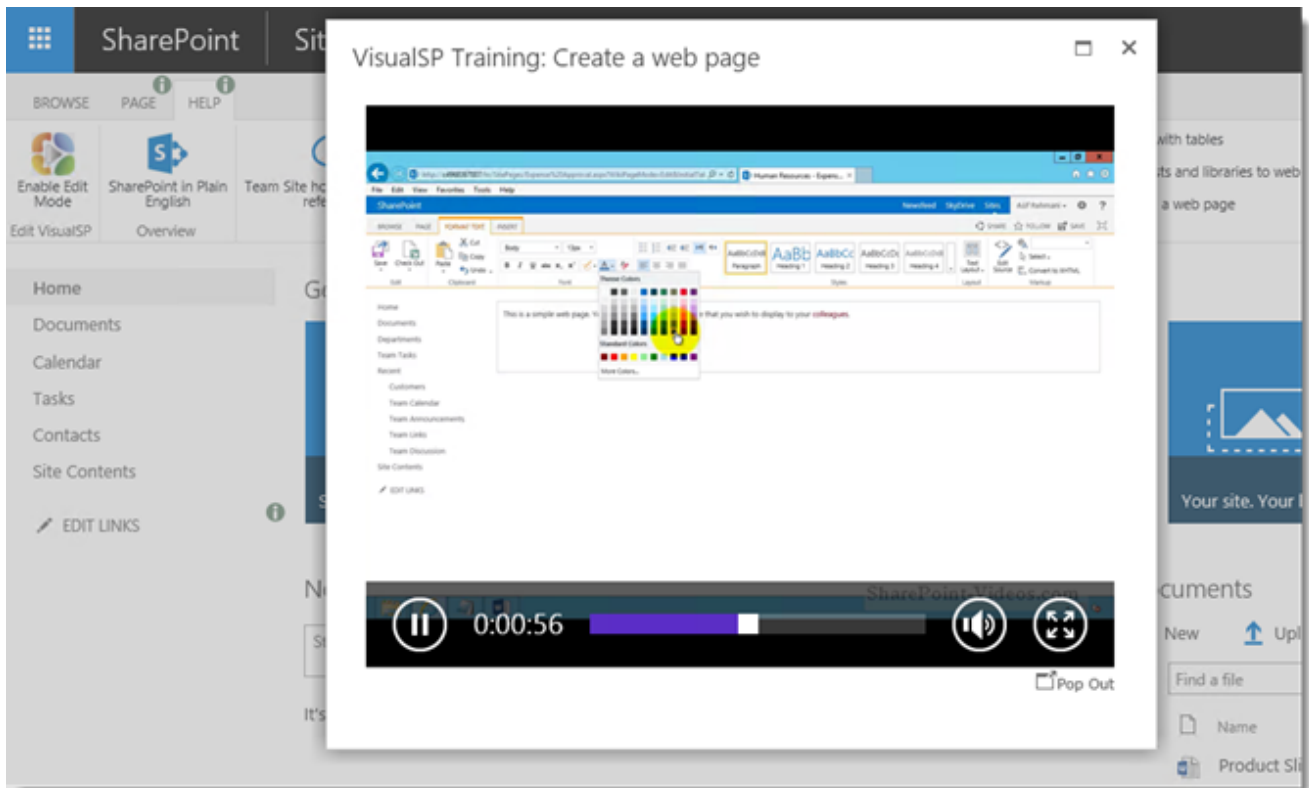

Tasks list

Calendar list

Pop-up dialog box showing video help

Try out the solution in various site collections within the farm to make sure all videos, documents and images appear as expected.
