

# Uninstall VisualSP Classic

 [support.visualsp.com/knowledge-base/uninstall-visualsp-classic/](https://support.visualsp.com/knowledge-base/uninstall-visualsp-classic/)

December 21, 2017

Applies to: **VisualSP Classic**

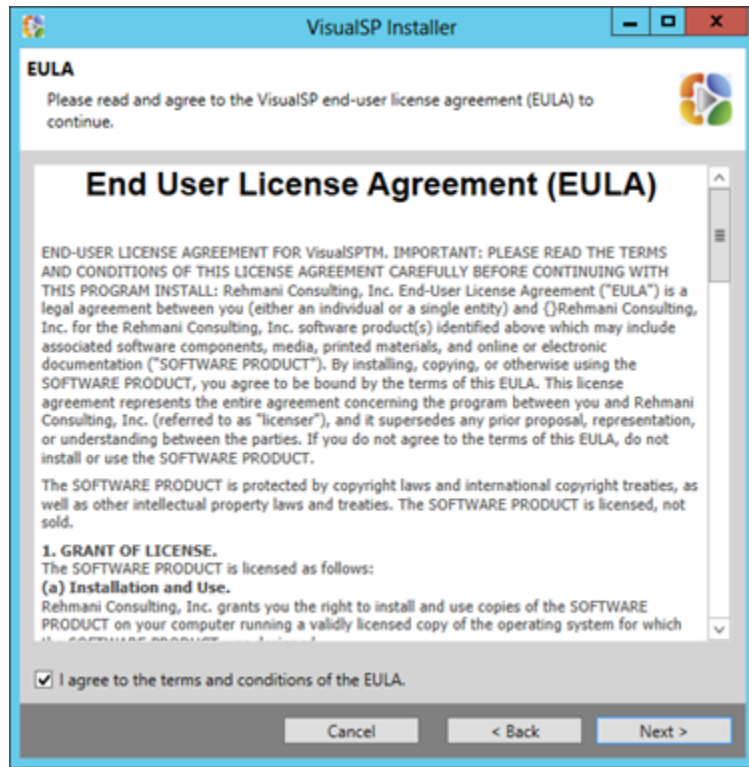

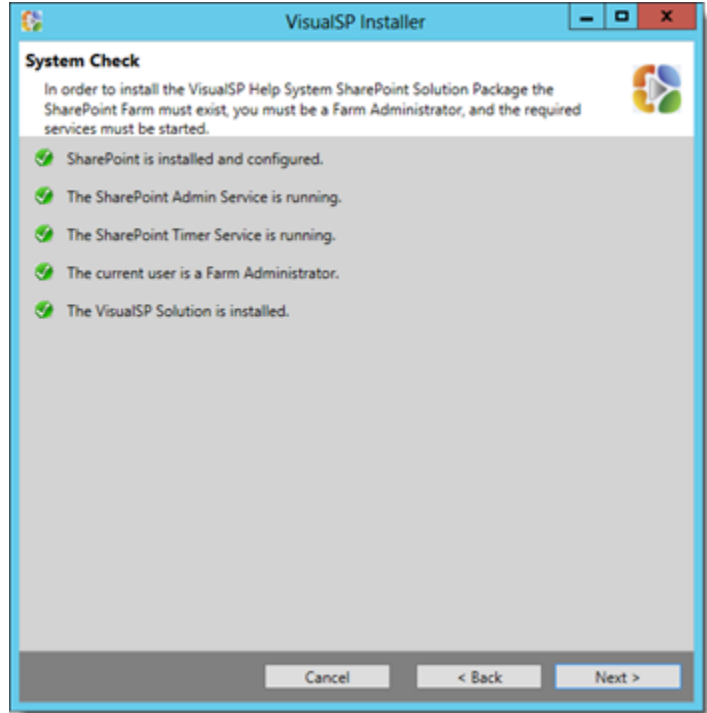

If you need to un-install VisualSP for any reason, run the VisualSP installer again and choose the **Uninstall** option.

1. On the Welcome screen, click **next**.

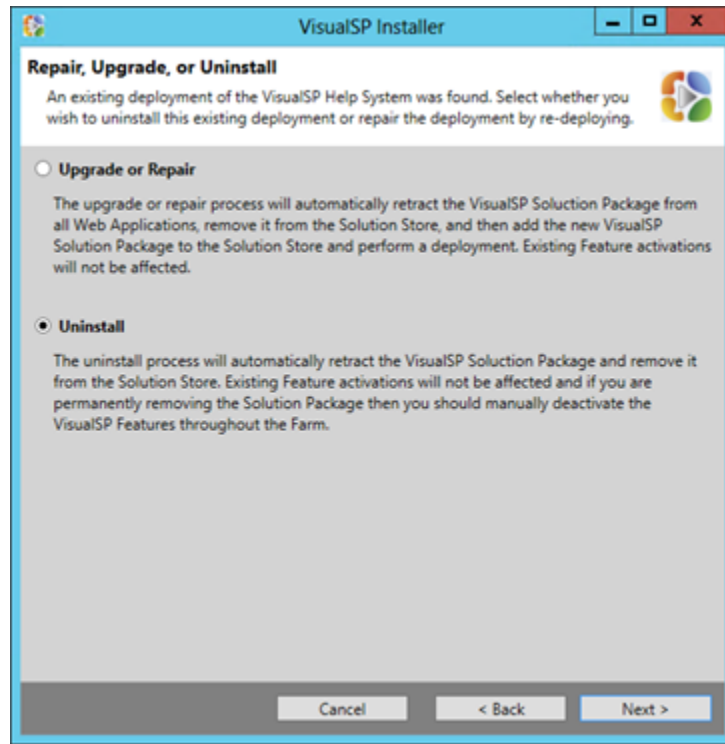

2. **On the System Check screen**, if all system checks pass, click Next to continue. If it encounters issues, correct them and run the installer again. Click **Next** when all items pass the system check.

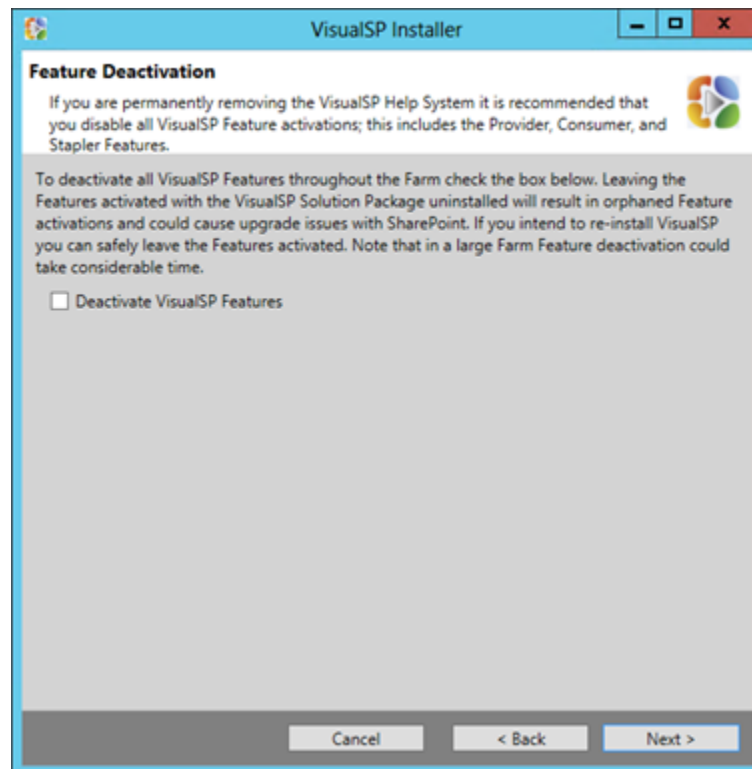

3. **On the EULA screen**, read the End User License Agreement. If you accept the license, click the checkbox to indicate your acceptance and click **Next**.

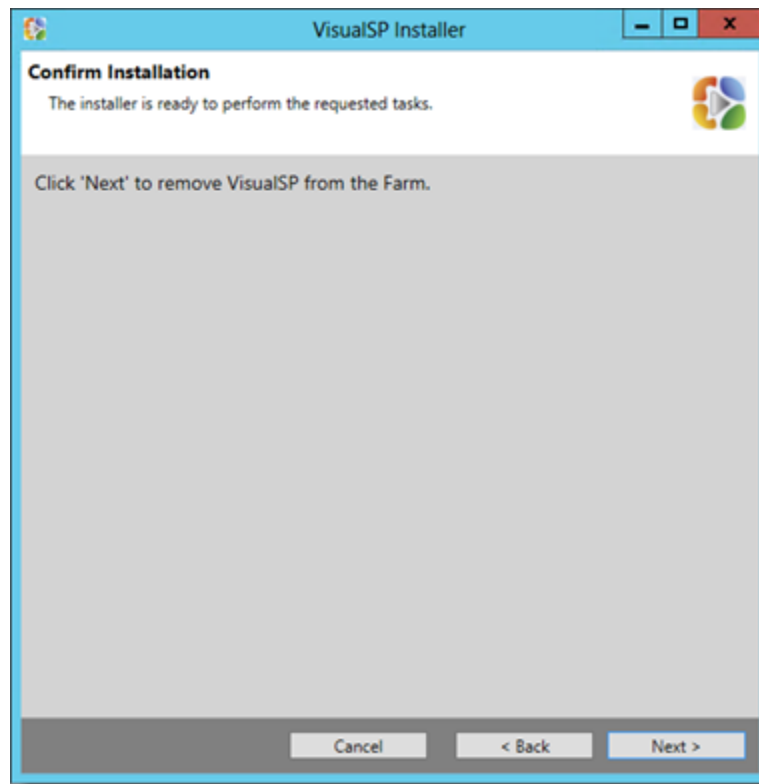

4. On the **Repair, Upgrade, or Uninstall** screen, select **Uninstall** and click **Next**.

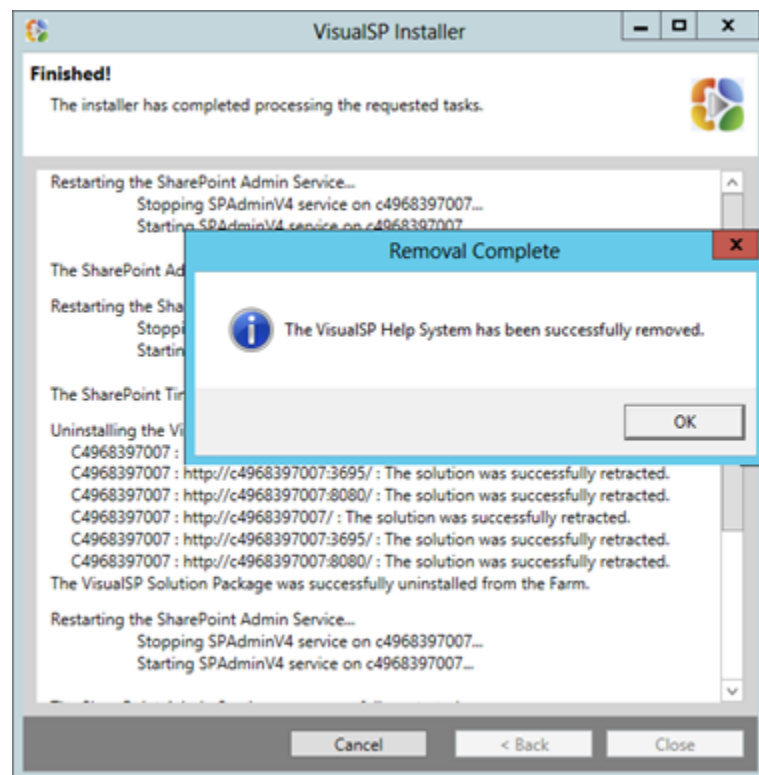

5. On the **Feature Deactivation** screen, check the box to Deactivate VisualSP Features. If you will be reinstalling VisualSP, it's safe to leave it unchecked.

6. On the **Confirm Installation** screen, click **Next** to begin uninstalling VisualSP.

7. When VisualSP finishes uninstalling, click **OK**, and **Close**.

**Note:** All of the media (videos, help documents, help screenshots) populated in the VisualSP Farm Hub site collection will still remain. You can go ahead and delete the data and/or the site collection completely if you don't need it anymore.
