

Upgrade to the latest VisualSP version

 support.visualsp.com/knowledge-base/upgrade-to-the-latest-visualsp-version/

December 13, 2018

Applies to: **VisualSP Classic**

VisualSP is constantly adding new features and improving the user experience so it is always beneficial to update to the latest version.

What Version Do I Have Now?

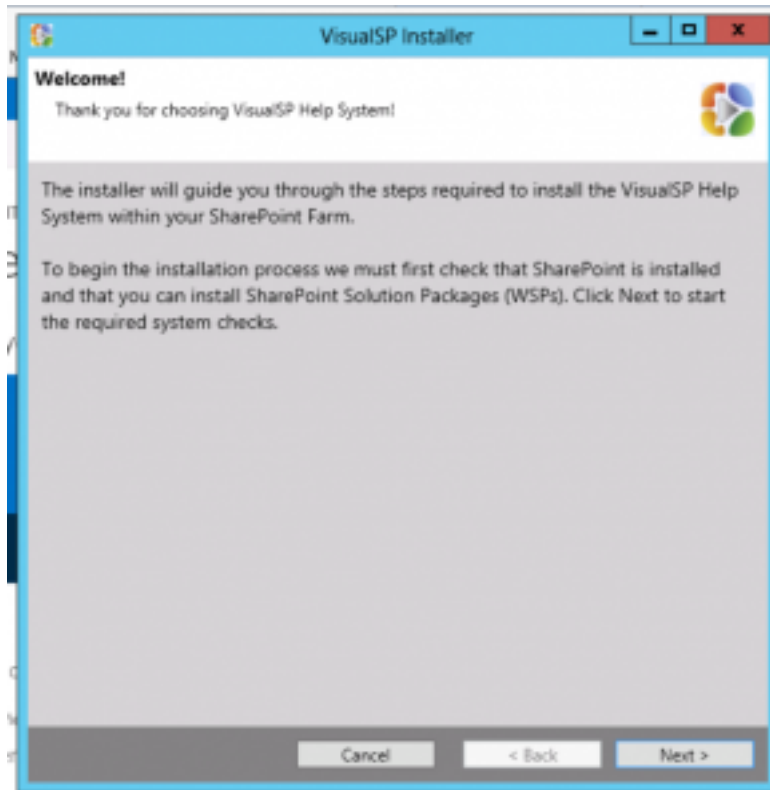

To find the version you are currently running, please reference [How to check for the installed version for instructions](#).

What is the Latest Version of VisualSP?

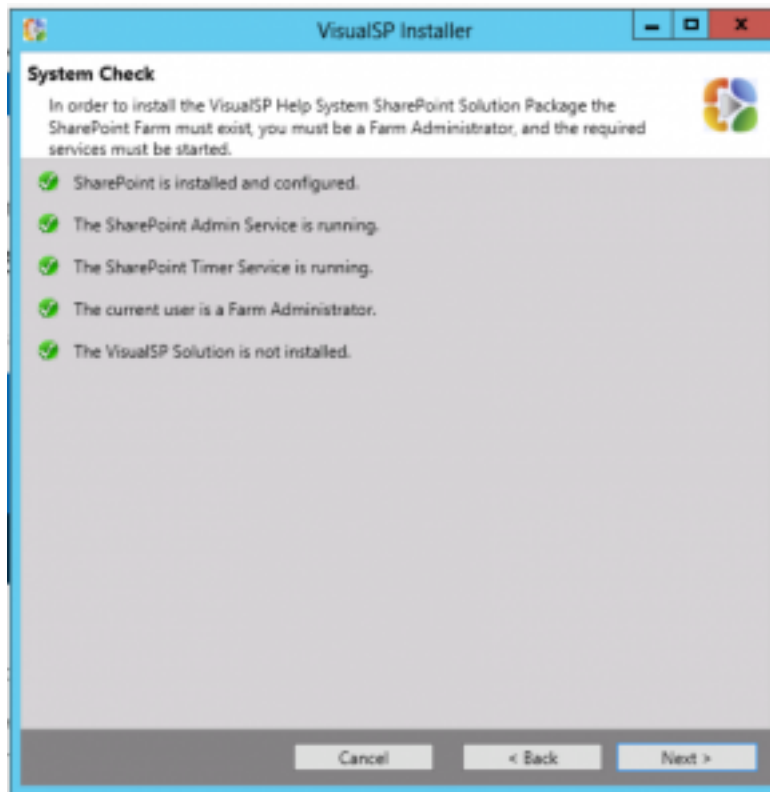

You will find the current version number on our [VisualSP Help System Customer Portal](#).

How Do I Upgrade?

1. Download the Setup Package for your particular version of SharePoint from the [VisualSP Help System Customer Portal](#).
2. Place the VisualSPInstaller.exe file on the server.
3. Log into one of your SharePoint Web Front-End servers as a SharePoint Server Administrator. It is not necessary to upgrade VisualSP on each SharePoint server. The upgrade will automatically be applied to all the other web front-end servers in the farm.
4. Double click on the **.exe** file to begin the upgrade.
5. On the **Welcome** screen, click **Next** to continue:

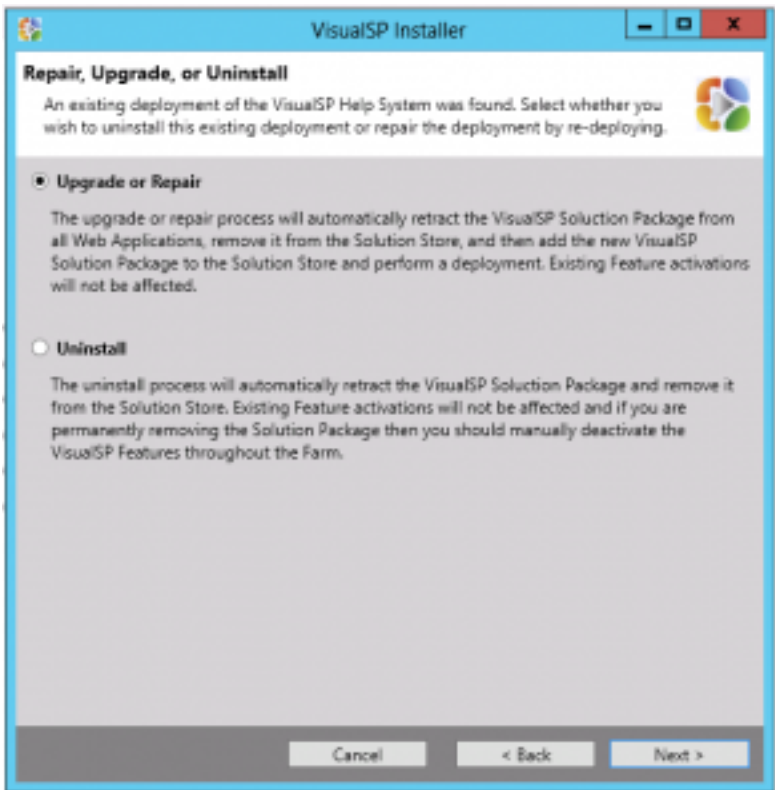

6. On the **System Check** screen click **Next**:

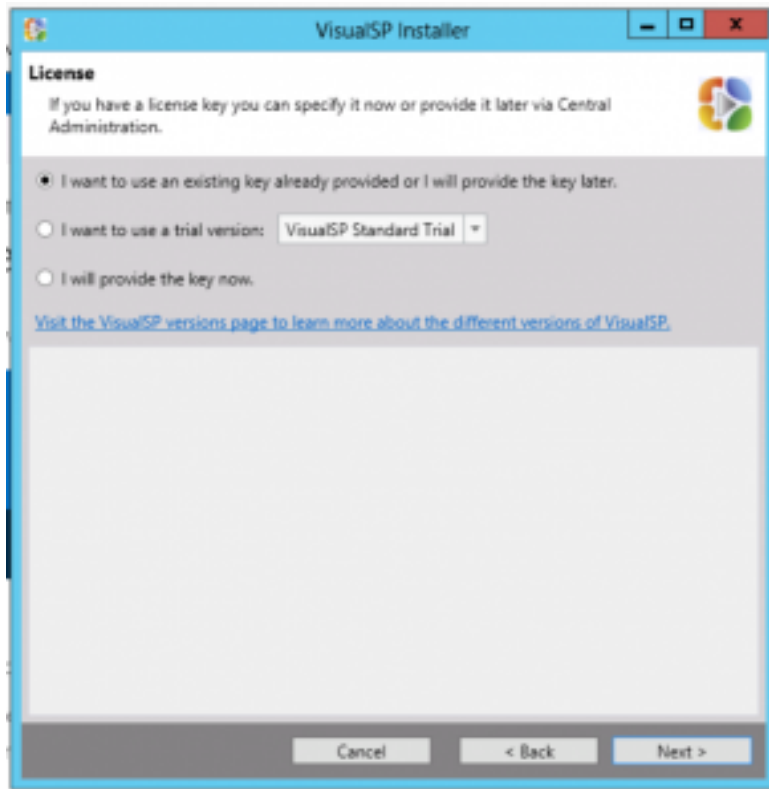

1. On the **EULA** screen, click to agree to the terms of the EULA and click **Next**:

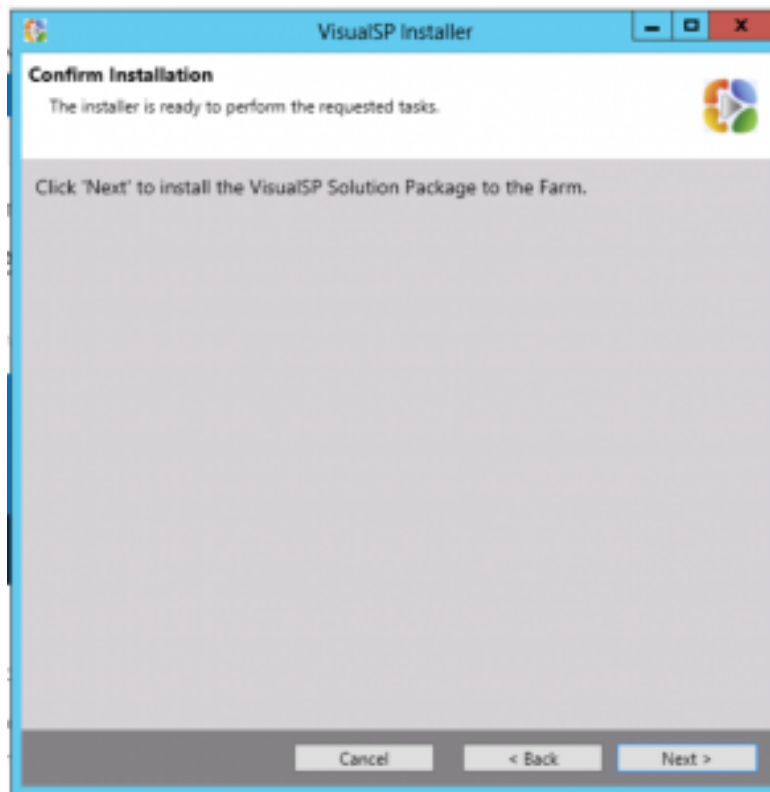

7. On the **Repair, Upgrade, or Uninstall** page, leave **Upgrade or Repair** selected. Click **Next**:

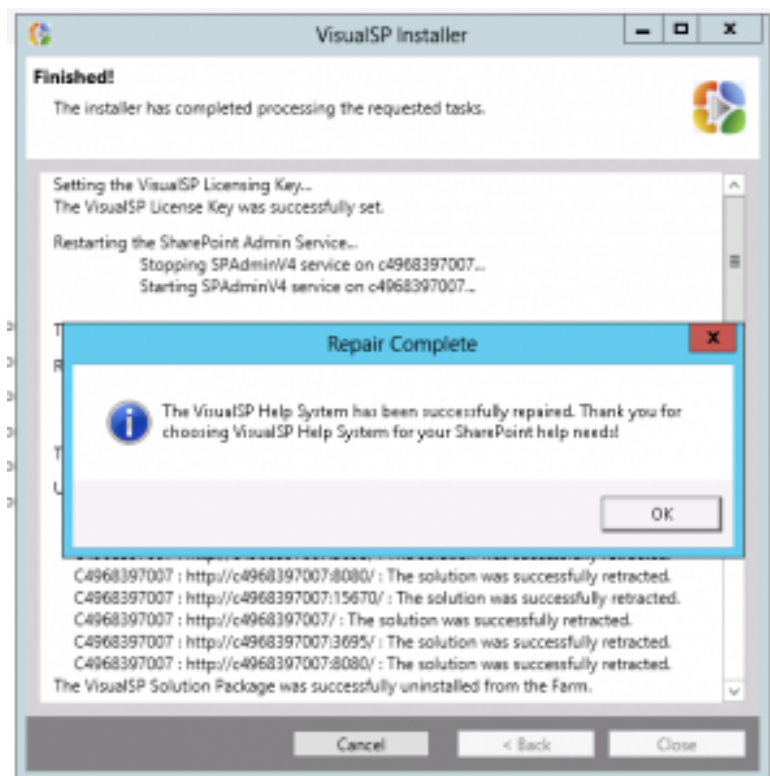

8. On the **License** screen, leave **I want to use an existing key already provided or I will provide the key later** selected. Click **Next**:

9. The configurations on the next screens will default to the settings you selected when VisualSP was originally set-up. If you don't want to make any changes you can click **Next** on all the rest of the screens.
10. When you reach the **Confirm Installation** screen, click **Next**.

10. When the installer is done you will see the **Finished!** screen with a **Repair Complete** confirmation. Click **OK**, then **Close**.

Your VisualSP installation is now up-to-date!
